CSMN Wifi: Android BYOD Configuration Advice

The following guide details how to configure an Android ‘Bring Your Own Device’ (BYOD) for connection to the “CSMN” Cisco enterprise wireless network.

1. Select ‘Settings’ on your device:

2. Select ‘Wi-Fi’ and ensure it is turned ‘On’:

3. Select the ‘CSMN’ wireless network:

4. The wireless network will attempt to establish a connection. Wait until the status below the network name displays ‘Connected’:

5. Start the internet browser, enter your username/password and click ‘Login’.

6. Install the zScaler SSL certificate by entering the following address into the internet browser: 
   http://mnconnect.cloud/zscaler

   You will be prompted to name the certificate. Enter ‘zscaler’ and click ‘OK’.

   You will now be connected to the wireless network and internet access will now be available from the device.
   To log out, visit http://mnconnect.cloud and click ‘Logout’.

*Note: zScaler SSL certificate install (step 6) only needs to be done once when initially connecting the device to the CSMN wireless network.
